AQUA MOP

With the Aqua Mop Microfibre Mopping System you never use a bucket that could carry germs, you use a clean Microfibre cover for each new area, you mop with clean solution, directly from the mop handle. You keep any unused solution for later use and you never tip dirty solution down the drain.
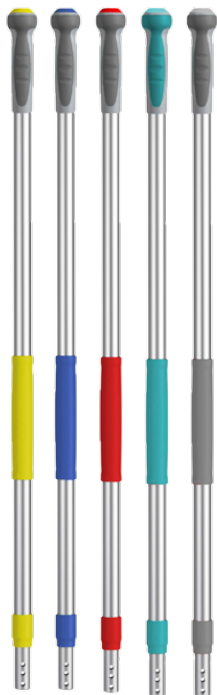

Press the button on the top of the handle to release solution and start mopping. When you have finished that area, remove the mop head and place it in a bag for later laundering. Go directly to your next area, get a clean mop head and clean without all the time consuming tasks of emptying and filling up mop buckets, or rinsing and wringing out mops.

Velcro flat mop system

Velcro Flat Mop Holder available in 30cm, 40cm and 60cm. The head attaches to telescopic mop handles which can be adjusted to the operator's correct height. These heads allow microfibre covers to be changed easily without the operator touching the dirty area. Simply attach a pre-soaked cover to clean your area, then put the dirty cover into your bag for laundering.

Telescopic handles

The telescopic handle is designed with your cleaner in mind. Regardless of height, the Telescopic pole can be adjusted to suit each of your cleaners individually.

Telescopic handles
